Valencia, CA 91355

PROJECT DESCRIPTION

Newhall Land and Farming Company proposes to install a new agricultural water supply well at the above -referenced facility. Groundwater from the start-up and development of this well will be collected in onsite storage tanks for settling of suspended solids and then discharged to Castaic Creek.

VOLUME AND DESCRIPTION OF DISCHARGE

Up to 1 million gallons per day for a total of 4 million gallons will be discharged over a period of 8 to 12 days to Castaic Creek (Latitude: 34° 27' 04.9"N, Longitude: 118° 37' 00"W). Castaic Creek flows to the Santa Clara River, a water of the United States. The well and outfall locations are shown in Figure 1, attached.

FREQUENCY OF DISCHARGE

Discharge will occur intermittently over a period of 8 to 12 days.

REUSE OF WATER

Reuse is not feasible during the well start-up. Groundwater will be produced only intermittently and without a reliable supply, due to the short duration of the project, it will be impractical for potential users in the area.
